

“ I’ve been trusted to take on different projects enabling me to develop my skills in a real-life working environment! ...I’ve gained invaluable skills. ”

I joined Quattro after finishing my GCSE’s. I attend Gloucestershire College once a week to learn the theory for my my level 3 extended diploma in Construction. After completing this course, I can then do a HNC course in college that’s equivalent to 2 years in university and can then complete a university degree!

I’m happy I chose a practical apprenticeship to fulfil my aspiration to be a technician as I’m already working on a wide range of different projects including early stage feasibility design, planning and assisting with working drawing packages for construction.

I’ve been trusted to take on different projects enabling me to develop my skills in a real-life working environment! There’s always someone available on my team to offer help and support if I need it.
